

A line drawing of a terminal block with four screw terminals. A cable is shown being inserted into the top terminal, with the wire being secured by a screw. The terminal block is shown from a perspective view, highlighting the connection point.

A line drawing showing a cable with a braided shield and a central conductor being inserted into a terminal block. The terminal block has two rows of terminals. The shield is connected to the ground terminal (marked with a ground symbol) in the top row, and the central conductor is connected to the positive terminal (marked with a '+' sign) in the top row. The bottom row of terminals is also shown, with a ground symbol and a '+' sign.

A diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to the ground terminal, and the central conductor is connected to the signal terminal.

A diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to the ground terminal, and the central conductor is connected to the signal terminal.

A line drawing showing a power supply unit being connected to a main unit. The power supply unit has a connector on its side that is being plugged into a corresponding port on the main unit. The main unit has several circular ports on its front face.

A line drawing showing a power supply unit being connected to a main unit. The power supply unit has a connector on its side that is being plugged into a corresponding port on the main unit. The main unit has several circular ports on its front face.

A technical diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to a terminal on the left, and the central conductor is connected to a terminal on the right. The terminal block is shown in a perspective view, with the cable entering from the bottom left and connecting to the terminals.

A technical diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to a terminal on the left, and the central conductor is connected to a terminal on the right. The terminal block is shown in a perspective view, with the cable entering from the bottom left and connecting to the terminals.

A technical diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to a terminal on the left, and the central conductor is connected to a terminal on the right. The terminal block is shown in a perspective view, with the cable entering from the bottom and connecting to the terminals.

A technical diagram showing a cable with a braided shield and a central conductor being connected to a terminal block. The braided shield is connected to a terminal on the left, and the central conductor is connected to a terminal on the right. The terminal block is shown in a perspective view, with the cable entering from the bottom and connecting to the terminals.
