

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular flange with a cross-shaped protrusion on one side. The cross has four arms, each with a rectangular end. The central flange has a central hole. On the opposite side of the flange, there is a threaded section with a hexagonal base.

WFB 32-20

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a line art representation, showing the geometry and features of the part.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central cylindrical body with a cross-shaped flange. The cross has four arms, each with a rectangular cutout. The central body has a threaded section on the right side, indicated by a series of parallel lines. The drawing is a perspective view, showing the three-dimensional shape of the component.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central square hole, four rectangular protrusions extending from the sides, and a threaded section on the right side. The drawing is a line art representation with no shading.

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central square hole, four rectangular protrusions extending from the sides, and a threaded section on the right side. The drawing is a line art representation with no shading.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a perspective view, showing the three-dimensional shape of the component.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. A central hole is visible through the circular body. On the opposite side of the cross, there is a threaded section, possibly a nut or a cap screw, which is shown in a perspective view. The drawing is a black and white line drawing, typical of engineering specifications.

WFB 32-20

WFB 32-20

A technical line drawing of a mechanical component. It features a central body with a cross-shaped protrusion on one side and a threaded cylindrical section on the other. The cross has four rectangular arms. The body has a flange-like structure with a small rectangular tab on top. The threaded section is on the right side.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms, each with a rectangular cutout. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a line art representation, showing the geometry and features of the part.
