

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a mesh-like pattern inside. There are four circular mounting points on the front face, one in each corner. On the top face, there are two circular features, one in the center and one towards the back right. On the right side, there is a circular feature with a flange. The drawing is a perspective view showing the front, top, and right side of the block.

A technical drawing of a square block with a central circular feature. The block has a square base with rounded corners. The top surface has a central circular feature with a cross-hatched pattern. There are four mounting holes on the top surface, one near each corner. The front face has a central circular feature with a cross-hatched pattern. There are four mounting holes on the front face, one near each corner. The side faces have mounting holes. The drawing is a perspective view.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a grid-like pattern inside. There are four circular mounting points on the top surface, one on each side of the central feature. There are also four circular mounting points on the front face, one on each side of the central feature. A small circular feature is visible on the right side of the block.

A technical drawing of a square block, likely a component of a mechanical system. The block has a central circular feature with a cross-hatched pattern, possibly indicating a threaded hole or a specific material. There are several mounting holes: four on the front face, two on the top face, and one on the side face. A small circular feature is also visible on the top face. The drawing is a perspective view, showing the top, front, and side faces.

KPS 45

A technical drawing of a square flange valve assembly. The main body is a square block with rounded corners. On the front face, there are four circular mounting holes at the corners and a central circular opening with a cross-hatched pattern. On the top face, there are two circular mounting holes. On the right side, there is a circular flange with a bolt hole. A small circular feature is visible on the top edge.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The front face features a central circular opening with a mesh-like pattern. There are four circular mounting points on the front face, one in each corner. The top face has a small circular feature in the center. The side faces have various mounting points, including a large circular feature on the right side and a smaller one on the left side. The drawing is a perspective view showing the top, front, and right side of the block.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a mesh-like pattern inside. There are four circular mounting points on the front face, one in each corner. On the top face, there are two circular features, one in the center and one towards the back right. On the right side, there is a circular feature with a flange. The drawing is a perspective view showing the front, top, and right side of the block.

A technical drawing of a square block with a central circular feature. The block has a square base with rounded corners. The top surface has a central circular feature with a cross-hatched pattern. There are four circular features on the front face, one on each side of the central feature. There are also four circular features on the top face, one on each side of the central feature. The block is shown in a perspective view.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a grid-like pattern inside. There are four circular mounting points on the top surface, one on each side of the central feature. There are also four circular mounting points on the front face, one on each side of the central feature. A small circular feature is visible on the right side of the block. The drawing is a perspective view showing the top, front, and right side of the block.

KPS 45

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a flange. There are four mounting points on the top surface, each with a screw. The side view shows a circular flange with a central hole and a smaller hole on the side.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a flange. There are four mounting points on the front face, each with a circular base and a central screw. The top face has a small circular feature. The side face has a circular feature with a flange. The drawing is a perspective view showing the front, top, and right side.

A technical drawing of a square block with a central circular feature. The block has a square base and a slightly raised top. The central feature is a circular opening with a grid-like pattern inside. There are four small circular features on the top surface, one on each side of the central feature. There are also four small circular features on the front face, one on each side of the central feature. A larger circular feature is visible on the right side of the block, possibly a mounting point or a connector. The drawing is a perspective view showing the top, front, and right side of the block.

A technical drawing of a square block with a central circular feature. The block has a square base with rounded corners. The top surface is flat and features a central circular opening with a flange. There are four small circular holes, one in each corner of the top surface. The front face has a large circular opening with a flange. There are four small circular holes, one in each corner of the front face. The side faces are flat and feature a central circular hole. There are four small circular holes, one in each corner of the side face. The block is shown in a perspective view.
