

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a perspective view, showing the three-dimensional shape of the component.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cross-shaped body with four rounded arms. This body is attached to a cylindrical hub. On the right side of the hub, there is a threaded section with a hexagonal nut-like structure at its end. The drawing is a perspective view, showing the three-dimensional form of the object.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cylindrical shaft that tapers to the right. On the left, there is a circular flange. Attached to the front of this flange is a cross-shaped connector. The cross has four rectangular protrusions, one on each arm, which appear to be designed to fit into corresponding slots or holes in another component.

WFB 32-20

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a line art representation, showing the geometry and features of the part.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cross-shaped body with four rounded arms. This body is mounted on a cylindrical base. The base has a flange with two rectangular protrusions on opposite sides. At the end of the cylinder, there is a threaded section with a hexagonal nut-like structure.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central square hole, four rectangular protrusions extending from the corners, and a threaded section on the right side. The drawing is a line art representation with no shading.

WFB 32-20

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a perspective view, showing the three-dimensional shape of the component.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cross-shaped body with four rounded arms. This body is attached to a cylindrical hub. The hub has a flange with two rectangular protrusions on its side. Extending from the other end of the hub is a threaded rod or pipe.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cylindrical shaft that passes through a circular flange. Attached to the front of the flange is a cross-shaped connector. This connector has four rectangular protrusions, one on each arm of the cross, which are positioned to fit into corresponding slots or guides. The drawing is a perspective view, showing the three-dimensional structure of the part.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. The part features a central circular body with a cross-shaped flange extending from one side. The cross has four arms of equal length. The central body has a threaded section on the opposite side, indicated by a series of parallel lines. The drawing is a line art representation, showing the geometry and features of the part.

WFB 32-20

A technical line drawing of a mechanical component. It features a central cross-shaped body with four rectangular protrusions. This body is connected to a cylindrical shaft that has a threaded section at its end. The drawing is oriented diagonally.

WFB 32-20

A technical drawing of a mechanical part, likely a cross-shaped connector or a specialized bolt. It features a central square hole, four rectangular protrusions extending from the corners, and a threaded section on the right side.
