

Technical drawing of a mechanical component, likely a valve or actuator. The drawing shows a cross-section of the component, revealing internal parts such as a piston or plunger, a spring, and a seal. The component has a cylindrical body with a flange at one end and a threaded section at the other. The drawing is a line drawing with no shading.

WFB 32-20

The image shows a technical drawing of a mechanical component, possibly a valve or actuator. It consists of two main views: a cross-sectional view on the left and a side view on the right. The cross-section reveals a central shaft with a T-shaped handle on the left and a smaller, rectangular component on the right. The side view shows the external profile of the device, featuring a large circular flange with several bolt holes and a threaded section on the right end.

WFB 32-20

A technical line drawing of a mechanical component, likely a valve handle. It features a central cross-shaped handle with four rounded ends. The handle is mounted on a circular base plate. A threaded stem extends from the center of the base plate. The drawing is a perspective view, showing the three-dimensional shape of the component.

WFB 32-20

A technical line drawing of a mechanical component. It features a central shaft with a cross-shaped flange. The flange has four rectangular protrusions, one on each arm of the cross. The shaft extends from the center of the cross. The drawing is a perspective view, showing the three-dimensional shape of the part.

Technical drawing of a mechanical component, likely a valve or actuator. The drawing shows a cross-section of the component, revealing internal parts such as a piston or plunger, a spring, and a valve seat. The component has a cylindrical body with a flange at one end and a threaded section at the other. The drawing is a line drawing with no shading.

WFB 32-20

The image shows a technical drawing of a mechanical component, possibly a valve or actuator. It consists of two views: a cross-sectional view on the left and a side view on the right. The cross-section reveals a central shaft with a T-shaped handle on the left and a smaller, rectangular actuator or valve stem on the right. The main body is a thick, circular flange with several bolt holes around its perimeter. The side view shows the component's profile, including a threaded section on the right end.

WFB 32-20

A technical line drawing of a mechanical component, likely a valve handle. It features a central cross-shaped handle with a circular base. The base has a flange with four mounting holes. A threaded stem extends from the center of the handle. The drawing is a perspective view showing the top and side of the component.

WFB 32-20

The image shows a technical drawing of a mechanical component, possibly a valve or actuator. It consists of two main views: a cross-sectional view on the left and a side view on the right. The cross-section reveals a central shaft with a cross-shaped handle or lever. The side view shows a cylindrical body with a flange and a threaded section on the right. The drawing is a line art illustration with no shading.

WFB 32-20

A technical drawing of a mechanical component, likely a valve or actuator, shown in a cross-sectional view. The component features a central shaft with a cross-shaped handle on the left and a threaded rod on the right. The main body is cylindrical with a flange and several bolt holes. The drawing is a black and white line drawing.

WFB 32-20

A technical line drawing of a mechanical component, likely a valve handle. It features a central cross-shaped handle with a circular base. The base has a flange with four mounting points. A threaded stem extends from the center of the handle.

WFB 32-20

A technical drawing of a mechanical component, likely a cross-shaped shaft or a coupling. It features a central shaft with a cross-shaped end. The shaft is surrounded by a flange or housing with a circular face. The drawing shows the component from a perspective view, highlighting its symmetrical design and the connection points.
