

**Base holder with hydraulic expansion tool holder
Y-adjustable for multi-spindle lathes**

Base holder with hydraulic expansion tool holder Y-adjustable for multi-spindle lathes

The high productivity and efficiency of multi-spindle lathes, combined with the precision and flexibility of CNC single-spindle lathes, is the reason for the success of our MS series.

This successful concept has of course been retained in the development of our powerful tool holder for the MS series. The results are particularly easy-to-set tool holders, which combine mature basic concepts with the proven hydraulic expansion technology.

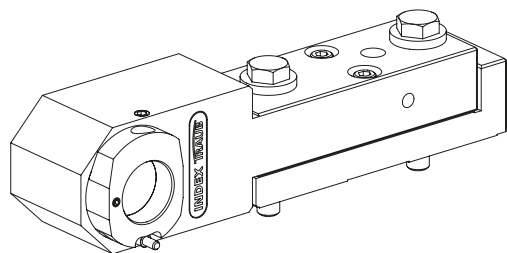

All the benefits of the new tool holder at a glance:

- extremely short setup times
thanks to easy and quick adjustment of the tool's Y-orientation by means of the eccentric sleeve (+/- 0.2 mm)
- very high change accuracy
- excellent damping properties
- Drill holder for a variety of tool mountings
