

## Quick-Change System INDEX CAPTO

## Quick-Change System INDEX CAPTO

With the introduction of the proven Capto interface, INDEX extends its product range by another modular tool system. A variety of available Capto mountings allow an individual configuration of the tool holder meeting all your machining requirements.

The intrinsically high change accuracy allows presetting the adapters outside the machine, ensuring short conversion times.

Very high torques can be transmitted due to the polygon contour of the interface. The compact design of our adapters – without a gripper groove – also increases the rigidity and creates more space in the work area.

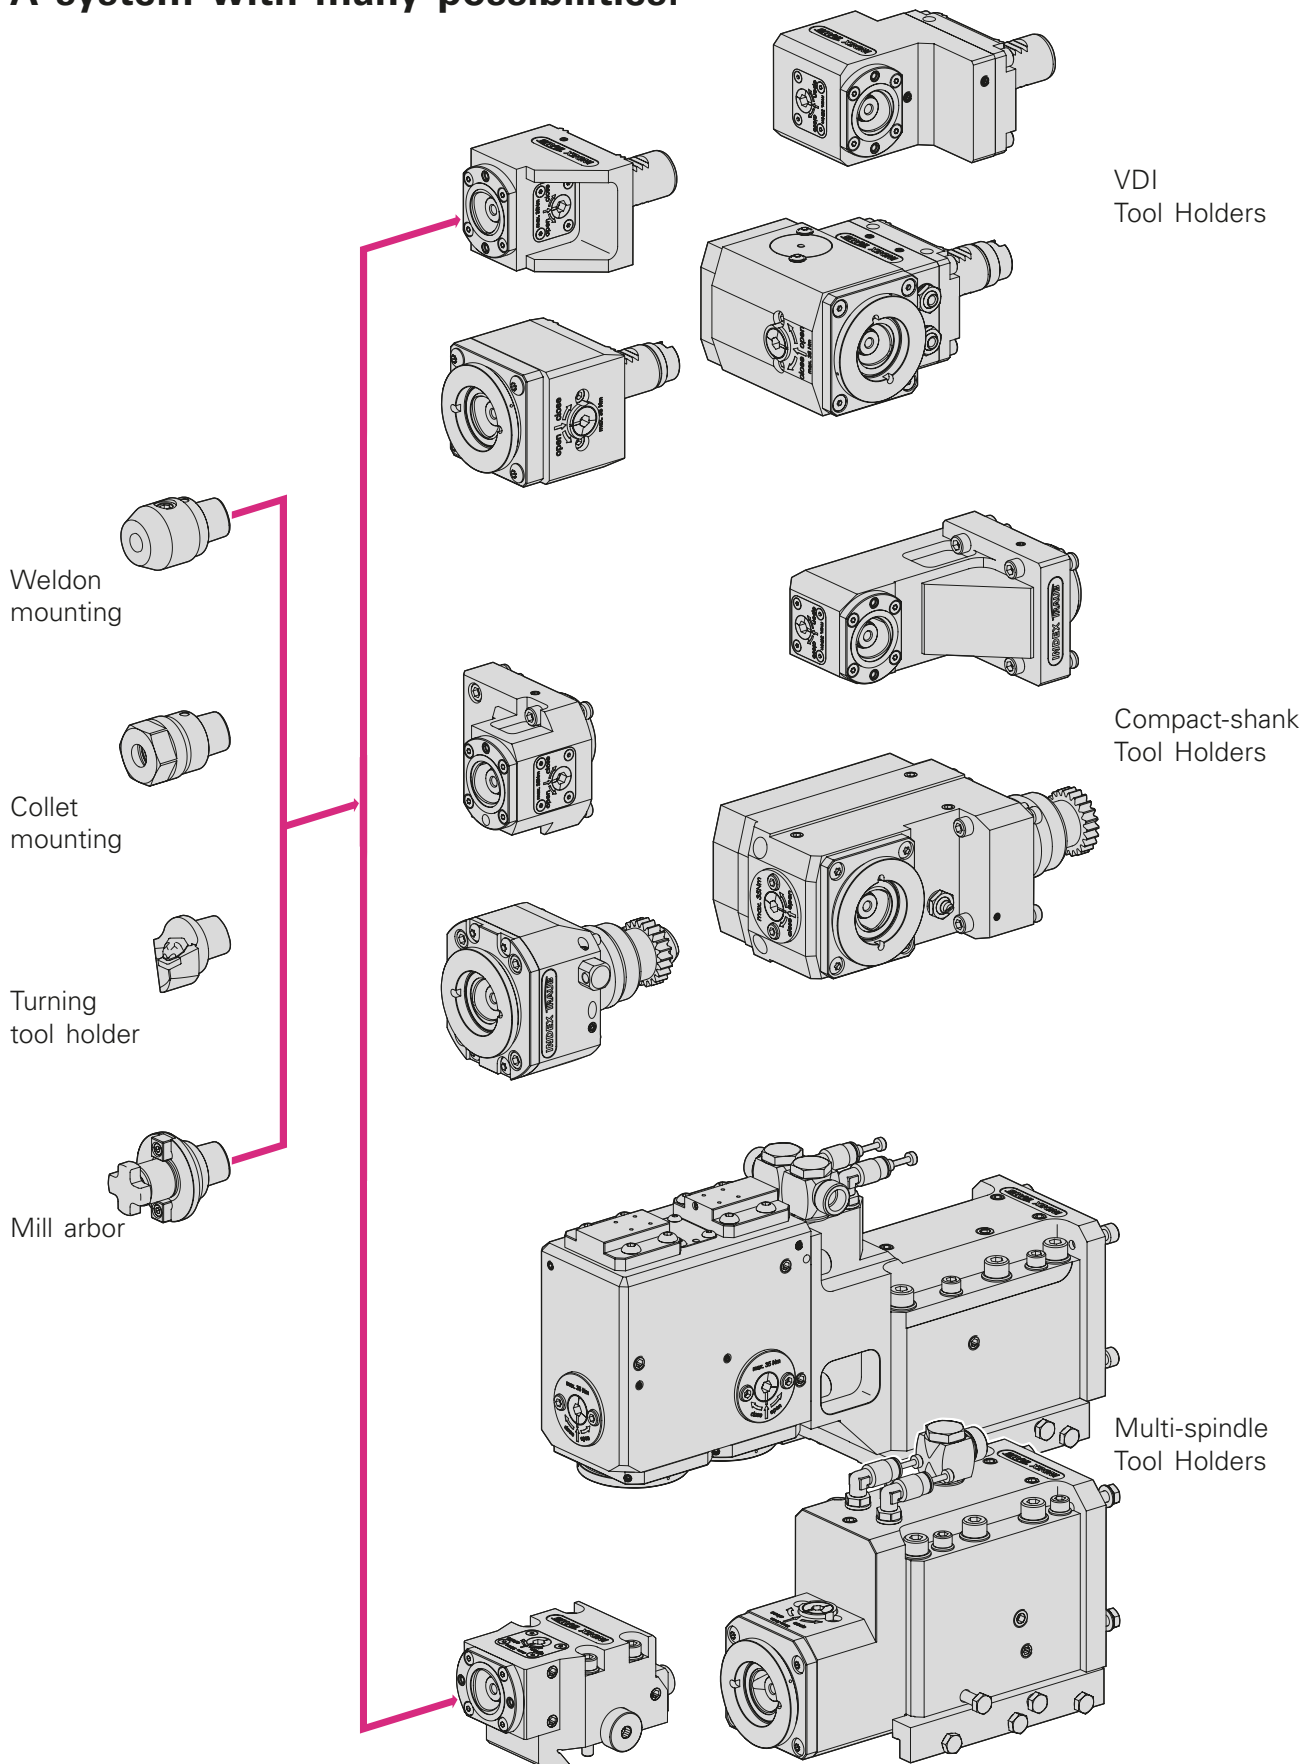

The latching function of the tool mounting in the tool holder is especially user-friendly, as it effectively prevents the adapter from falling out.

The advantages of the INDEX CAPTO quick-change system at a glance:

- Low investment costs compared to normal tool holders through a variety of combinations
- Easy to use adapter change by a latching function in the tool holder and a visual mark of the clamping area
- Reduced setup time through tool presetting outside the machine
- Transmission of high torques
- High rigidity
- Compact design of the tool mounting
