

Straight tool holders with internal cooling

NEW GENERATION

Straight tool holders with internal cooling - New generation

The internal coolant supply on straight live tool holders, which has been tried and tested for years, has been optimized and replaced by a successor variant.

The new solution is now even more powerful with a shorter design.

The main advantages are:

- short, space-saving design
- up to 15 mm shorter compared to currently available products
- maximum speed is possible at maximum pressure (80 bar)
- low-wear coated sealing surfaces
- seal is suitable for dry running

The optimized internal cooling of tool holders enables an increase in the service life of cutting tools of up to 30% compared to tool holders with external cooling.

This tool life extension makes these tool holders significantly more productive and thus also more economical.

In our iXshop, you will find the matching sealing washers and sealed collets in the *tool holders and accessories* section.
