

Touch probes

Touch probes

For our turn-mill centers, we offer various measuring systems from Renishaw and Blum that optimize your machining processes and increase efficiency.

The two measuring systems offer the highest measuring accuracy. Radio technology is used for data transmission. Various touch probes and styluses enable different measuring and monitoring tasks in our turn-mill centers.

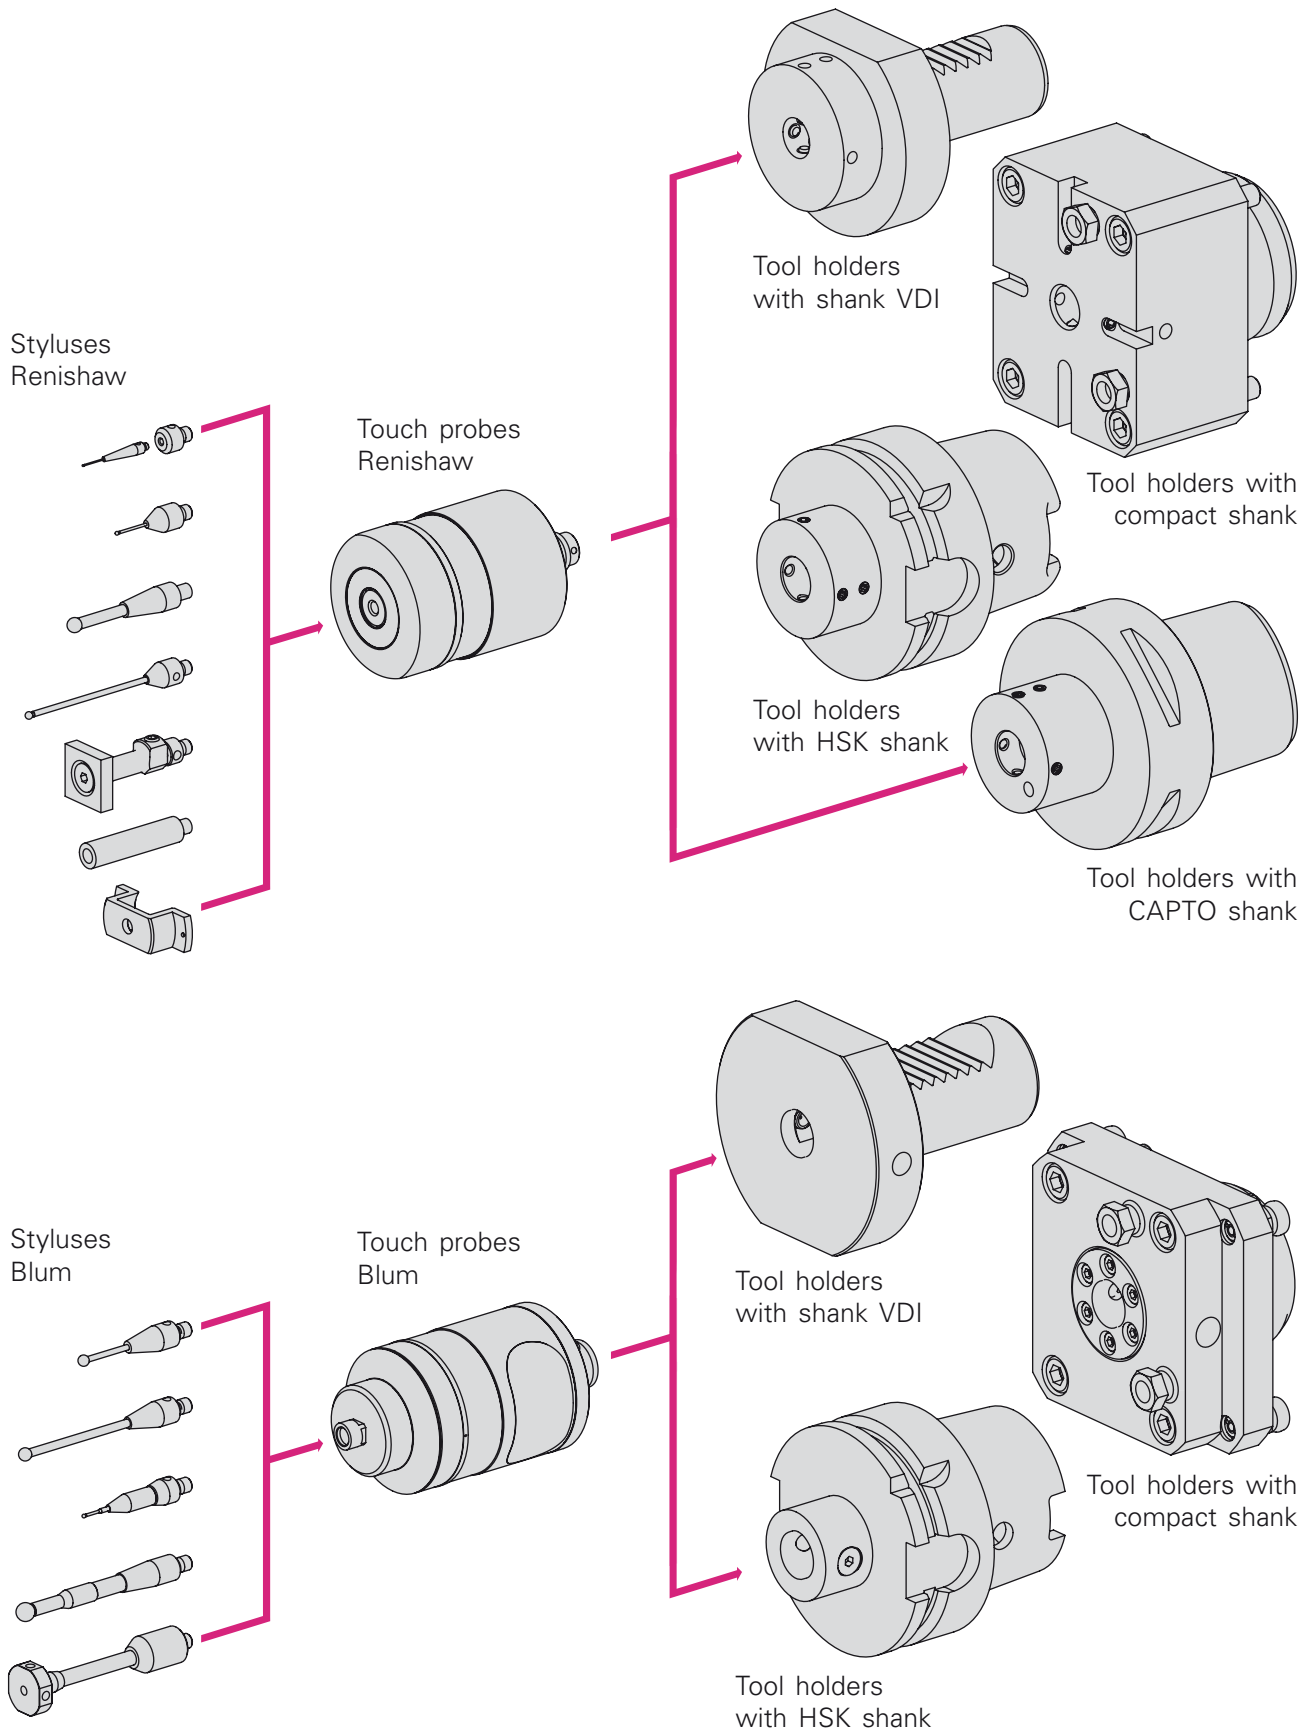

In our iXshop, you will find an individual solution for your applications in the workpiece measuring section with the correct specification of your shank, e.g., VDI, compact shank, HSK, and CAPTO.

The advantages of the touch probes at a glance

- Fast and precise workpiece and tool measurements in the machine.
- Measure multiple workpiece features through an extensive selection of touch probes, adapters, and probe extensions.
- Very high measurement accuracy.
- Optimized manufacturing processes through automatic data transfer to control and correct the corresponding parameters.
- Multiple workpiece and tool probes can be used in combination.

Please feel free to contact us if you have any further questions +49 711 3191-9854 or visit us online: ixshop.ixworld.com
